

## Notes on Constructing Units

1 - When some units that may not be available in a real war due to maintenance, workup, etc. are, in this game assumed to be instantly ready. This avoids the extremely difficult task of having to determine different maintenance cycles, dependent on different types of platforms, etc. and then have to further accurately determine reinforcements from that (if you wish to implement, there is a 30% chance of these units not being available<sup>1</sup>). Some exceptions to this have been made:

- Smaller nations were generally given the benefit of the doubt when constructing forces to give their players something to do (for example the availability and range of Australian submarines and ability of France/UK to move land forces into theater).
- Submarines of which some are staggered to prevent overcrowding of the board and add some of the real world “not everything is immediately available” issues. Old Chinese subs are so noisy and prone to breakdowns that they are assumed to be in indefinite maintenance or sunk before they ever do anything useful, meaning that they don’t need to be represented and therefore don’t clutter the board (This leaves new Nuke and Diesel subs).

2 – Platforms are generally categorized (4<sup>th</sup> Gen, 5<sup>th</sup> Gen) or are assumed to all be the most numerous of the given type (all Chinese destroyers are type 54’s, all US cruisers are Ticonderoga’s) for larger nations. For bombers only those able to carry AShM and Cruise Missiles were made into units.

3 - Assume 30% of subs are not combat ready, and 10% respectively take 3, 7, 14 days to get moving. Given this article's<sup>2</sup> estimates of US submarine readiness, this seems to be roughly correct.

4 – With the start of a major war involving the US it is assumed that many cold conflicts would begin to heat up around the world and require US deployments to keep them cold, as such many Atlantic assets of various countries (US, Canadian) are not available within the timeframe of the game (1 month), and many other actors are limited in what they can provide (UK, France, token NATO forces).

## Reinforcements

Where a % in a box is shown (e.g. [50%]), that indicates a 50% chance for each listed element to show up (these should be pre-rolled before the game). So [70%] 2 x Los Angeles, indicates a 70% chance of each Los Angeles showing up – not an all or nothing 70% chance of both showing up. Other notes in brackets [One of four is available] indicates other deployment notes.

<u>Day 1</u>		
<u>Day 2</u>		
U.S. 1 x F-22A (5 <sup>th</sup> Gen Fighter)	Day 2	Coming from Hawaii. Based on expert advice <sup>3</sup>
Aus 3 x F-35A (5 <sup>th</sup> Gen Fighter)	Day 2, any air sector	Assuming 1 day prep.

Aus ESG	Day 3 (3811)	<b>Setup w/ 3 Missiles.</b> Assume 1 day prep and then steaming at 25 knots. Assuming 1600 km journey.
Aus/NZ ESG	Day 3 (3811)	<b>Setup w/ 3 Missiles.</b> Assume 1 day prep and then steaming at 25 knots. Assuming 1600 km journey.
Aus 4 x Collins SS	Day 3 (3811)	Assuming no prep time and transit to area at 15 knots. Assuming 1600 km journey.

<sup>1</sup> Land units included in this game are the militaries' expeditionary units and as such are designed to be available for crises. Some land units are not expeditionary but are available in such numbers (US and Chinese land units for example) that a number would be available no matter what. Air units have good availability due to that fact that airframes are relatively quick to repair and being one or two airframes down in a squadron is not measured in the game.

### French and British CSG's and ESG's

Took 12 days from the Persian Gulf to Taiwan in the 1996 Taiwan strait crisis, so ~3 weeks to get carrier into theater if all stops pulled (aircraft embarked enroute, allies support logistically), or 4 weeks more realistically. The alternative to this is French, British, and NATO taking over U.S. 6<sup>th</sup> Fleet's responsibilities to allow them to move to Asia.

<b>Unit</b>	<b>Representing</b>	<b>Setup</b>
6 x Combined Arms Brigades (Amphibious)		1 per: 1111, 1211. 2 in 1709, 2 in 1906
24 x Combined Arms Brigades	While there are 78 CABs in China, in the first month or so most of these wouldn't be able to activate for combat, so I draw the number 24 from the number of those in the East + Southern theaters as this represents a reasonable number that could be activated/moved for combat.	2303, 1903, 1808, 1806, 1709, 1610, 1309, 1210, 1110, 1109, 1105, 1009, 0908, 0808, 0806, 0709, 0708, 0707, 610, (x2) 0408, 0405, 0210, 0208. 15 x Artillery Brigades		1906, 1110, 0908, 0805, 0707, 0307, 0306, 0109, (x7) in Reserve

<sup>11</sup> As per discussion in the footnote about the 5th Aviation Brigade. *PLA Aerospace Power: A Primer on Trends in China's Military Air, Space, and Missile Forces 3rd Edition* (2022) on pg. 22 states that "Regiments and aviation brigades are typically composed of between 20 and 40 aircraft." With 150+ airframes total (<https://nationalinterest.org/blog/buzz/china%E2%80%99s-j-20-fighter-jet-fierce-it-has-numbers-problem-194739>, October 2021), and some prototypes and testing units, this gives each brigade at a minimum 36 airframes (within the 20-40 range) plus some extra which represents 120 aircraft across 3 brigades, leaving some 30+ for prototypes, testing and evaluation, write-offs, etc.

<sup>12</sup> Locations are chosen thusly: units on the Russian-Korean border are assumed to not be available, as are units from deeper in China. 4 Armor units from Beijing are assumed to be the "political protection force" and are not available.

## Calculating Land Unit Combat Power<sup>30</sup>

Note that as not all unit types are covered in the source document, so in those cases the most comparable unit has been used instead. For example many nations have ADA Battalions, which are therefore typically represented by ADA Bn (Avenger) as this is the closest comparable unit, even those most countries do not field ADA Battalions based around Avengers.

### Taiwan Sub Unit Info

Unit	Force Equivalent	Note
Mech Infantry (Modern Infantry and ATGM, 60's-2000's APC)	0.71	As Infantry Bn (M113)
Mech Inf Battalion (Modern Infantry and ATGM, Mix Modern and Old APC)	0.855	As average of Infantry Bn (M2) and Infantry Bn (M113)
Armored Cav Battalion (Modern Infantry and ATGM, Mix Modern and Old APC, Gen 2.5 Tanks)	0.8366	As average of Infantry Bn (M2), Infantry Bn (M113), Tank Bn (MIB 40xT64 / T72), and Tank Bn (MIB 40xT80)

Marine Brigade	4.01	Unit composition as described in source (see above). <sup>35</sup> Note that the 1 <sup>st</sup> and 2 <sup>nd</sup> Brigades appear to be operating different equipment than the other 4 brigades, but this game does not model that. <sup>36</sup> Some brigades may not have fully self-propelled fire support. <sup>37</sup> Other equipment differences may also be present, <sup>38</sup> and units (3 <sup>rd</sup> , 4 <sup>th</sup> , 5 <sup>th</sup> ) are likely currently underequipped with sufficient amphibious vehicles. <sup>39</sup>
Combined Arms Brigade	5.15	Unit composition assumed to 3 Mech Infantry Bn, 1 Tank Bn, and 1 Artillery Bn.
Combined Arms Brigade (Amphibious)	6.6	4 combined arms battalions (two amphibious assault gun coy (105mm) <sup>40</sup> , 2 amphib mech inf companies, a firepower coy (mortars and man-portable air defense systems—MANPADs), and a service support company (w/ recce and engineer plt.). # Missile Salvos and Inventories

## General Notes

SAMs are not tracked as it would overload the air umpire. There is a lack of unified information on many nations' missile inventories, thus some missile types are assumed to be infinite due to lack of data and desire to not overload Control.

Conventional salvos based around delivering the arbitrary number of ~30,000 lbs. of explosive, bunker busters count as 1.5x their payload. Old missiles vulnerable to interception .75 x their payload. Conventional missiles cap at 50/salvo as attempting to hit 50 aim points no matter warhead size would produce an effect. AShM based around delivering sufficient missiles to have a good chance to kill a SAG (75% chance with full engagement).
